## Multiple network access

MailmaX.400 supports all network access facilities provided by its sister product, UA-FI.

This means that with MailmaX.400, you can connect to your mailbox through TCP/IP over a LAN, with a PPP/SLIP connection over PSTN or ISDN, as well as with a dial-up or X25 network.

## Main Features

- Proof of Sent/Received messages
- Microsoft Word, Excel or any other kind of attachment supported
- Forward messages
- Hierarchical folder structure in MS Explorer format with drag-and-drop
- Receipts and delivery reports correlated back to, and stored with the original message
- Specify priority, importance, reply requested, sensitivity, and security classification and other parameters for sending messages
- Automatic document recognition for attachments
- SMAPI compliant to interface with other applications like Microsoft Word or Excel
- Configurable address templates for sending faxes, telexes, GSM- and pocket pager text
- Define templates for message
